Badr Choubai

github.com/BadrChoubai | badrchoubai.dev

Software Engineer specializing in building scalable integration APIs and cloud-based web systems using C#/.NET and Azure. Currently seeking a software engineering internship for 2027. Skilled in designing robust architectures, automating deployments, and collaborating across teams to deliver reliable, maintainable, and well-tested solutions.

Education

Metropolitan State University of Denver
Bachelor of Science in Computer Science

- **Relevant Coursework:** Data Structures and Algorithms, Software Development Methods and Tools, Networking and Distributed Systems

Professional Experience

Software Engineer **May 2022 – Apr 2024**
Beeline

- **API Development & Architecture:** Designed and implemented an API Gateway using **C#/.NET**, consolidating multiple services into a unified access point. This reduced integration complexity, improved scalability, and streamlined testing workflows—helping the team meet quarterly delivery goals despite reduced headcount.
- **API Gateway — Rate Limiting:** Implemented the Gateway's Rate Limiter feature, protecting downstream services from traffic spikes and ensuring consistent API availability.
- **Performance Engineering:** Owned the performance testing strategy end-to-end, researching, building, and maintaining a load testing suite using **Grafana K6** to validate system reliability under real-world traffic conditions.
- **Cloud Deployment & CI/CD:** Supported continuous integration and deployment pipelines, with API services containerized using **Docker** and deployed to **Azure Kubernetes Service (AKS)** for scalable, resilient delivery.
- **RESTful Services:** Contributed to a large suite of **REST APIs** enabling clients to programmatically manage Vendor Management System (VMS) data, driving seamless **third-party integrations** and enhancing developer experience.
- **Testing Frameworks:** Developed **unit and integration tests** with **xUnit** for C#/.NET services, strengthening overall test coverage and reliability.
- **Identity & Access Management (IAM):** Migrated deprecated Auth0 namespaced custom claims to the updated non-namespaced model, reducing token complexity and improving security compliance.
- **Technical Support & Reliability:** Triaged and resolved client-reported issues in **Jira**, maintaining API uptime and integration reliability within **SLA timelines**.

CMS Migration Specialist **Mar 2021 – May 2022**
Metropolitan State University of Denver

- **Platform Modernization:** Led the migration of **2,000+ web pages** from a legacy CMS (TerminalFour) to **WordPress**, using automation tools.
- **Stakeholder Coordination:** Collaborated with multiple departments to resolve content and structural gaps, optimizing for **navigation, clarity, and engagement**.
- **Documentation & Training:** Created **training materials and video tutorials** to help staff manage WordPress content post-migration, ensuring long-term sustainability.

Skills

- **Languages:** C#, JavaScript/TypeScript, Python, Go
- **Web Development:** HTML, CSS, JavaScript (Vue 3, Vite, TypeScript, GraphQL)
- **Frameworks & Architecture:** ASP.NET Core, Entity Framework Core, REST API Development, Kestrel
- **Cloud & Infrastructure:**
  - Azure: Container Apps, Kubernetes Service, Application Insights, Event Grid, Service Bus
  - Infrastructure as Code: Terraform, ARM, Bicep
  - Containerization: Docker, Kubernetes, Microk8s
- **Tools & DevOps:** Git, Azure DevOps, Team Foundation Server, Jira, Prometheus
